EDUCATION

The University of Memphis.

Master's in Computer Science, CGPA: 4/4

Memphis, TN

2024-2026

Keshav Memorial Institute Of Technology.

B.Tech in CSE (AI&ML) , CGPA: 3.6/4

Hyderabad, India

2020-2024

WORK EXPERIENCE

EdgeForce Solutions

Data Scientist Intern

Hyderabad, India

Jan'24 - Apr'24

- Developed and visualized a machine learning model and an interactive dashboard aimed at forecasting the Remaining Useful Life Time (RUL) of Heavy-Duty vehicles.
- Improved the accuracy of the AI model from 72% to 83%, resulting in more precise forecasting and better decision-making for maintenance schedules.
- Worked on a Condition-Based Monitoring (CBM) system for AFVs (Armoured fighting vehicle) to enhance equipment reliability, reduce downtime, and improve maintenance efficiency.

LANGUAGES AND SKILLS

- **Languages and Frameworks :** Python , Java , HTML , CSS , Bootstrap , Sass , ReactJS , Flask , MySQL , PostgreSQL , SpringBoot.
- **Development Tools :** VS Code, GitHub , Google Colab , Kaggle, PowerBi.

COURSE WORK

Object Oriented Programming , Data Structures & Algorithms , Machine Learning , Deep Learning , Natural Language Processing , Computer Vision , Database Management System , Computer Networks , Operating Systems.

PROJECTS

Movie Recommendation System

A content-based movie recommendation website built using machine learning.

- Using attributes such as genre, director, description, actors, etc. for movies to make suggestions for the users.
- Designed to improve user experience by suggesting movies similar to the ones they have already liked or watched, utilizing Natural Language Processing (NLP) techniques to analyze movie descriptions and metadata.
- Technologies Used: ReactJS , Sass , Machine Learning , Natural Language Processing , Flask.

Hurricane Damage Detection

A deep learning-based system designed to detect property damage caused by hurricanes using satellite images.

- The primary objective of this project is to accurately classify whether a property has been damaged by a hurricane, helping in quicker disaster response.
- Utilized a Convolutional neural network (CNN) to analyze satellite imagery and identify damage patterns.
- Integrated the model into a web application using Flask, allowing users to upload images and receive real-time damage detection results.
- Technologies Used: Deep Learning , Flask.
